

## INCLUDED IN BOX TO MYDRIVE MIGRATION FEATURES

|                                       |                                                                                                                                                                                                                       |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>One Time Migration</b>             | The initial data migration from source to destination is considered as One-time migration.                                                                                                                            |
| <b>Delta Migration</b>                | Migration of incremental changes made in source during the onetime migration.                                                                                                                                         |
| <b>Folder Display</b>                 | An option to map source and destination users through a visual selection of folders in the CloudFuze webapp.                                                                                                          |
| <b>Versions</b>                       | Migration of all file versions from source to destination.                                                                                                                                                            |
| <b>Selective Versions</b>             | Migration of selective versions of files from source to destination. If we opt for five, the last five versions will get migrates to the destination.                                                                 |
| <b>Root Folder Permissions</b>        | CloudFuze preserves all root folder permissions along with access levels.                                                                                                                                             |
| <b>Sub Folder Permissions</b>         | CloudFuze preserves all subfolder permissions along with access levels.                                                                                                                                               |
| <b>Root File Permissions</b>          | CloudFuze preserves all Root file permissions along with access levels.                                                                                                                                               |
| <b>Inner File Permissions</b>         | CloudFuze preserves all inner file permissions along with access levels.                                                                                                                                              |
| <b>External Shares</b>                | CloudFuze can migrate external permissions(Files/Folders shared with people of outside organizations) of files/folders to the destination along with access levels.                                                   |
| <b>Shared Links</b>                   | CloudFuze migrates all shared links from source to destination and maintains the type of links.                                                                                                                       |
| <b>Timestamp Preservation</b>         | Maintaining the original timestamps, including creation and modification dates and times, when transferring data to the destination cloud.                                                                            |
| <b>In-Line Comments</b>               | Inline file comments of the box will be migrated to the destination cloud. All the file comments will preserve in the CSV formatted file in the destination.                                                          |
| <b>Long Folder Path</b>               | If the destination cloud has a long folder path limitation, the system automatically adjusts the destination's path as per the limitation.                                                                            |
| <b>Special Character Replacement</b>  | Special characters not supported by the destination cloud will be automatically replaced with underscores (_) or hyphens (-). This ensures that the integrity of the data is maintained during the migration process. |
| <b>Embedded Links</b>                 | The system retains the addresses of links present within a file, which point to other files in the cloud. These links' addresses will be transformed into appropriate destination formats during Migration.           |
| <b>Supressing email notifications</b> | The system will automatically prevent the generation of email notifications for collaborations on folders/files originating from the destination cloud.                                                               |
| <b>Box Notes Migration</b>            | Migration of Box Notes files in the .DOCX format to the destination cloud.                                                                                                                                            |

## INCLUDED IN BOX TO SHARED DRIVE FEATURES

|                                       |                                                                                                                                                                                                                       |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>One Time Migration</b>             | The initial data migration from source to destination is considered as One-time migration.                                                                                                                            |
| <b>Delta Migration</b>                | Migration of incremental changes made in source during the onetime migration.                                                                                                                                         |
| <b>Folder Display</b>                 | An option to map source and destination users through a visual selection of folders in the CloudFuze webapp.                                                                                                          |
| <b>Versions</b>                       | Migration of all file versions from source to destination.                                                                                                                                                            |
| <b>Selective Versions</b>             | Migration of selective versions of files from source to destination. If we opt for five, the last five versions will get migrates to the destination.                                                                 |
| <b>Root Folder Permissions</b>        | CloudFuze preserves all root folder permissions along with access levels.                                                                                                                                             |
| <b>Sub Folder Permissions</b>         | CloudFuze preserves all subfolder permissions along with access levels.                                                                                                                                               |
| <b>Root File Permissions</b>          | CloudFuze preserves all Root file permissions along with access levels.                                                                                                                                               |
| <b>Inner File Permissions</b>         | CloudFuze preserves all inner file permissions along with access levels.                                                                                                                                              |
| <b>External Shares</b>                | CloudFuze can migrate external permissions(Files/Folders shared with people of outside organizations) of files/folders to the destination along with access levels.                                                   |
| <b>Shared Links</b>                   | CloudFuze migrates all shared links from source to destination and maintains the type of links.                                                                                                                       |
| <b>Timestamp Preservation</b>         | Maintaining the original timestamps, including creation and modification dates and times, when transferring data to the destination cloud.                                                                            |
| <b>In-Line Comments</b>               | Inline file comments of the box will be migrated to the destination cloud. All the file comments will preserve in the CSV formatted file in the destination.                                                          |
| <b>Long Folder Path</b>               | If the destination cloud has a long folder path limitation, the system automatically adjusts the destination's path as per the limitation.                                                                            |
| <b>Special Character Replacement</b>  | Special characters not supported by the destination cloud will be automatically replaced with underscores (_) or hyphens (-). This ensures that the integrity of the data is maintained during the migration process. |
| <b>Embedded Links</b>                 | The system retains the addresses of links present within a file, which point to other files in the cloud. These links' addresses will be transformed into appropriate destination formats during Migration.           |
| <b>Supressing email notifications</b> | The system will automatically prevent the generation of email notifications for collaborations on folders/files originating from the destination cloud.                                                               |

**Box Notes Migration**

Migration of Box Notes files in the .DOCX format to the destination cloud.
